

HAZARDZERO TECHNOLOGIES LTD

Disaster Intelligence & Emergency Technology

Detect earlier. Understand risk. Alert faster. Reduce harm.

R!SEWATCH

Environmental Risk Intelligence Platform

HazardZero builds connected sensing, analytics and alerting infrastructure that helps governments, communities, farms, industrial sites and businesses detect hazards earlier and respond faster.

1 PROBLEM

- Nigeria and Ghana face recurring floods, severe rainfall events and industrial-safety risks that damage lives, farms, businesses and public infrastructure.
- Existing monitoring and emergency-response systems are often fragmented, reactive and slow.
- Communities, agencies and enterprises need localized data, early warning and faster decision support.

2 SOLUTION

R!SEWATCH combines field sensors, connectivity, dashboards and local alerting into one integrated platform that transforms field data into actionable risk intelligence and early warnings.

- ✓ Water-level, rainfall and environmental sensing
- ✓ AI-assisted analytics and risk dashboards
- ✓ SMS, siren, light and display alerts
- ✓ Incident logs, maps and decision support
- ✓ Deployments for communities, farms, estates, factories and public infrastructure

WHY NIGERIA & GHANA NOW

NIGERIA CASE STUDY

- In 2022, nationwide flooding affected more than 2 million people in Nigeria and caused major damage to homes, farms and infrastructure.
- Recurrent flood exposure across states such as Lagos, Kogi, Bayelsa, Anambra and Benue shows the need for localized early-warning systems.

GHANA CASE STUDY

- Accra and other urban centres face recurring flood events driven by intense rainfall, drainage constraints and rapid urban growth.
- In June 2015, the Accra flood and fuel-station disaster killed more than 150 people, highlighting the cost of delayed warning and poor visibility.

4 SNAPSHOT

SECTOR
Climate Risk / Disaster
Tech / Industrial Safety

TRL
Working Prototype / Early
Field Validation

STAGE
Pre-Seed

HQ
Nigeria

FOCUS MARKETS
Nigeria, Ghana, West Africa

5 MARKET OPPORTUNITY

TAM

West Africa disaster monitoring, public-safety and industrial-risk management market

SAM

High-risk communities, farms, estates, factories, logistics sites and public infrastructure in Nigeria & Ghana

SOM

70+ deployments targeted by 2029 across Nigeria, Ghana and nearby West African markets

6 PLATFORM EXPANSION

R!SEWATCH

Flood and environmental risk intelligence

AirGuard

Gas leak and hazardous-air monitoring for factories, plants and warehouses

Shield

Emergency communication infrastructure for sirens, public displays and mass alerts

7 TRACTION & VALIDATION

- Working prototype built and lab-tested
- Water-level and flow sensing validated
- Dashboard, SMS, siren and light alerts integrated
- Initial pilot planning under way
- Technical discussions held with relevant hydrology, emergency-response and infrastructure stakeholders
- Founding team spans software, hardware and embedded-systems engineering

8 REVENUE MODEL

- Hardware sales: sensors, sirens, gateways and displays
- Installation and commissioning fees
- SaaS subscriptions for dashboards, analytics and alerting
- Annual maintenance and support contracts
- Institutional contracts with governments, utilities, farms and enterprises
- Data and risk-intelligence services

9 FUNDRAISE

RAISING

₦650M (~\$480,000 est.)

PRE-SEED

To move HazardZero from prototype to field validation, early commercial deployment and regional scale-up.

10 USE OF FUNDS

- 30% Field pilots & deployments
- 20% Product development and platform hardening
- 15% Hardware, sensors and assembly
- 12% Team & engineering
- 8% Certifications & compliance
- 7% Sales & partnerships
- 5% Operations
- 3% Contingency

100%

11 GROWTH ROADMAP

- 2026 Validate pilots in Nigeria
- 2027 Commercialize R!SEWATCH and begin Ghana expansion
- 2028 Add AirGuard and grow institutional contracts
- 2029 Scale to 70+ deployments across West Africa

DEPLOYMENT TARGET (CUMULATIVE)
